

CLOUD COMPUTING & DATA SECURITY
COMP4381
First Assignment

Instructor: Dr.Ruba Awadallah

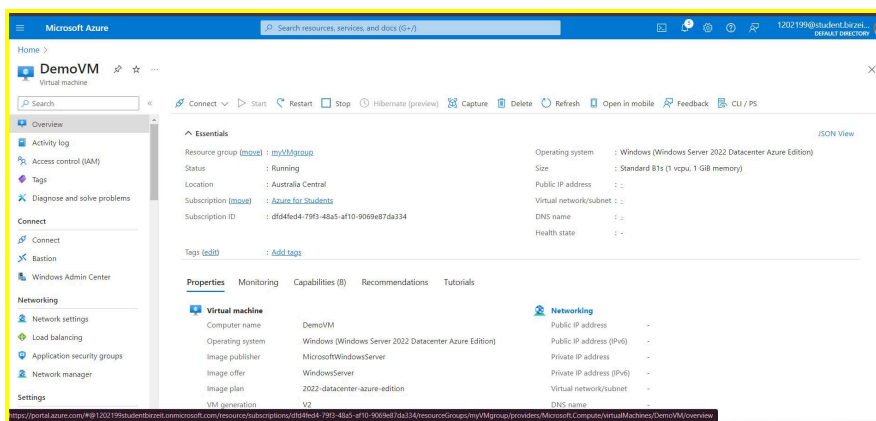

Name:Yuna Nawahda
ID:1211524

IP address :20.28.56.107

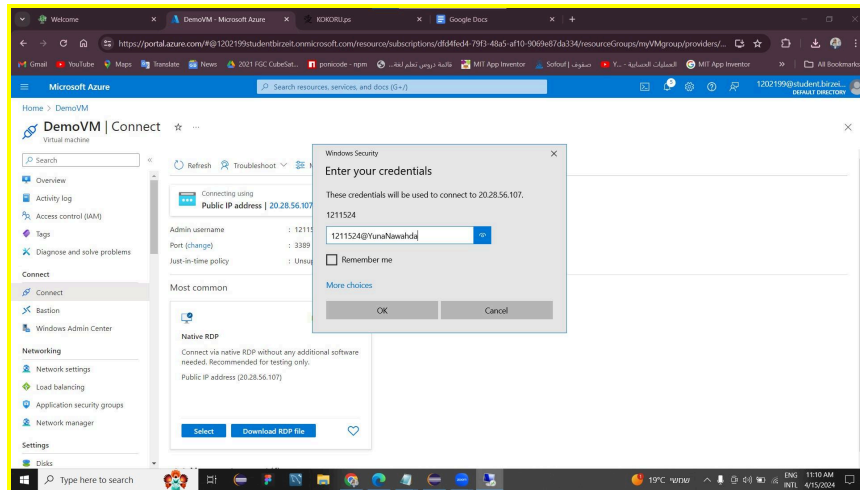

Lets make BAKERY APP IN VM AZURE 🥰🥰!!!

- **Here I create the VM called DemoVM on Azure.**
 - Enter *virtual machines* in the search.
 - Under Services, select Virtual machines for students.
 - In the Virtual machines page, select Create and then Virtual machine. The Create a virtual machine page opens then fill out as bellow :

- **Make my user name my id that equals 1211524 and the password equals to 1211524@YunaNawahda. student ID, and the password should be your ID followed by the (@) symbol, then your name and family name; the first letter is capitalised;**

- **Choose a subscription (a free tier should be available) that i choose Azure for student that give the students budget 100\$ to use it.**

Location : Australia Central
 Subscription (move) : [Azure for Students](#)
 Subscription ID : dfd4fed4-79f3-48a5-af10-9069e87da334

- **Select a resource group (create a new one or use an existing one). Here i created a new one and named it myVMgroup**

^ Essentials
 Resource group (move) : [myVMgroup](#)
 Status : Running

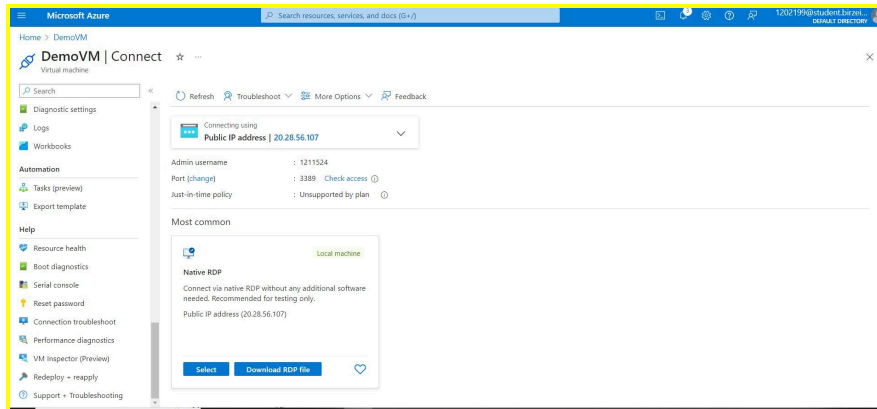

- **Pick a virtual machine image (Windows Server 2022 Datacenter).as required**

Operating system : Windows (Windows Server 2022 Datacenter Azure Edition)

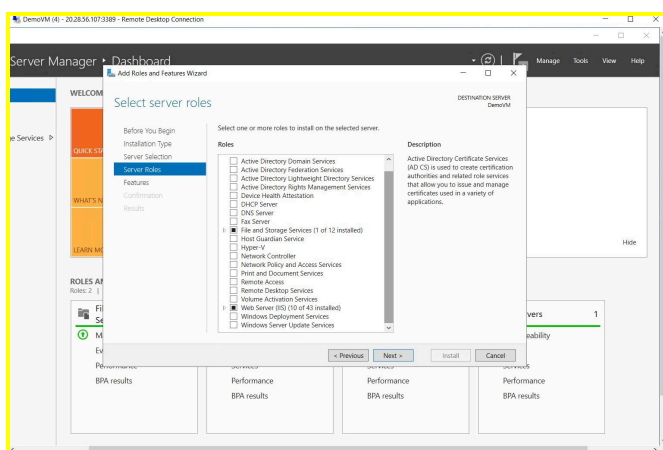

- **Configure VM size (choose a free tier option, Basic B1s). as required**

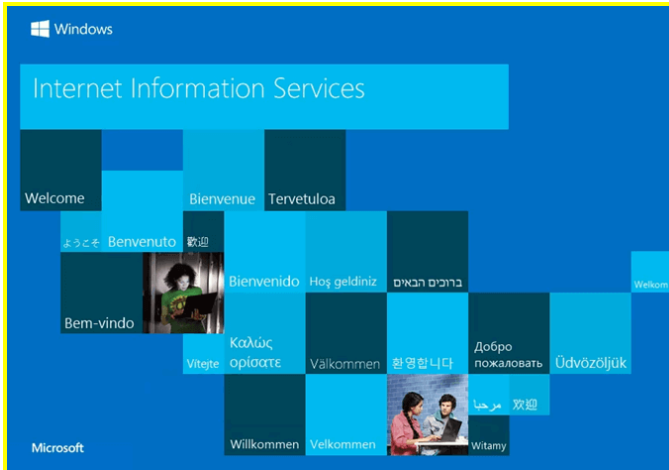

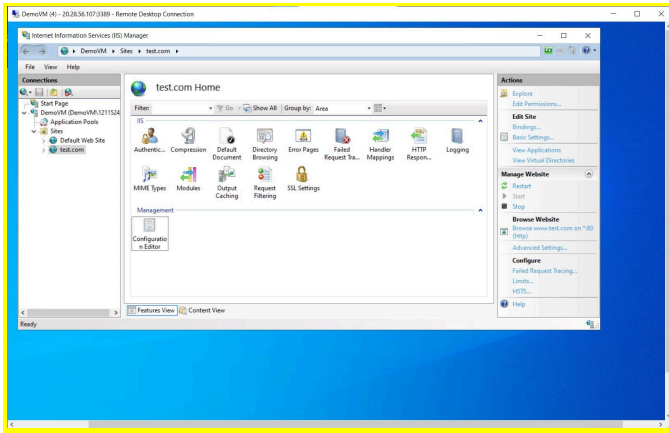

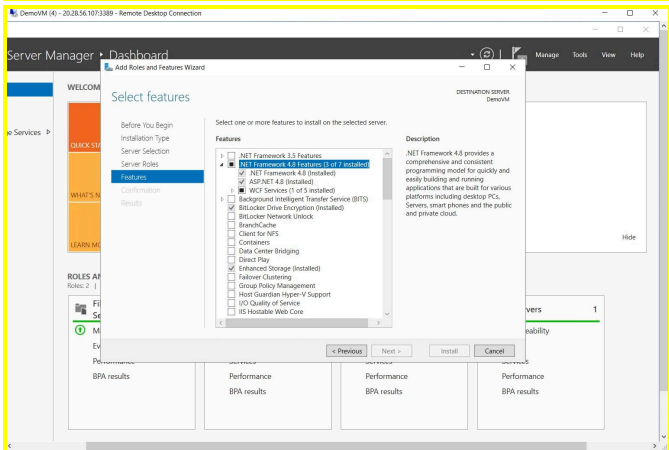

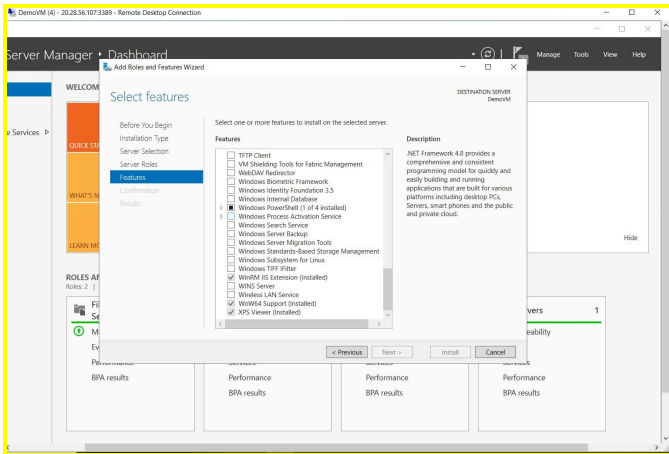

Size : Standard B1s (1 vcpu, 1 GiB memory)

- Once the VM is created, locate the "Connect" button and choose either RDP or SSH, depending on your OS preference. Since i choose RDP as recommended when i want to connect i should download the RDP file to build configuration to open the VM that i create and give IP 20.28.56.107.as shown on the screen below:

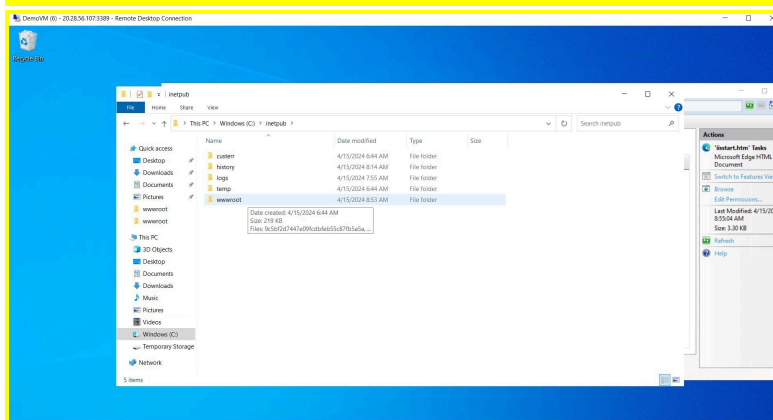

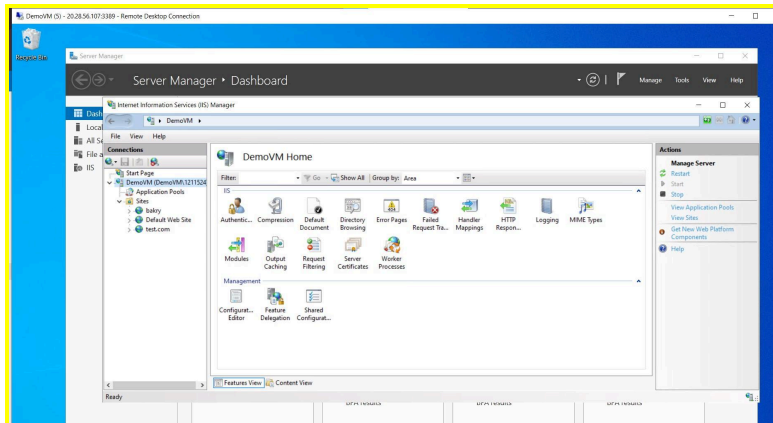

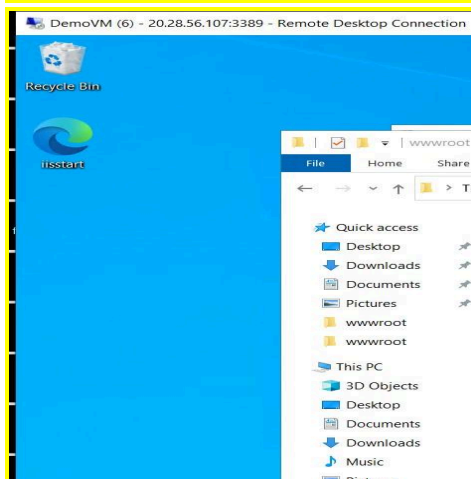

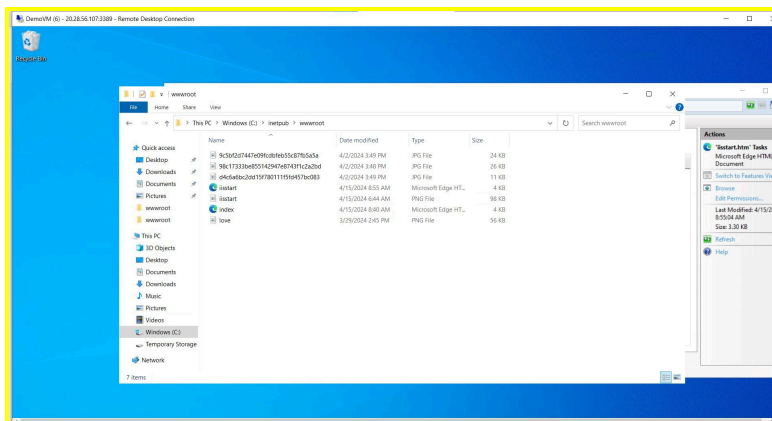

- Install a web server like Internet Information Services (IIS) for Windows
 - Open Add roles and features Wizard.
 - click Next
 - Select server roles Select the Web Server (IIS) option on the server roles page.
 - Click on Add Features.
 - the Web Server (IIS) option is checked and proceed by clicking Next.
 - On the Select Features window, simply proceed by clicking Next as we do not need any additional features at this time.
 - Confirm installation selections.
 - Open a web browser and confirm that IIS is functioning correctly.

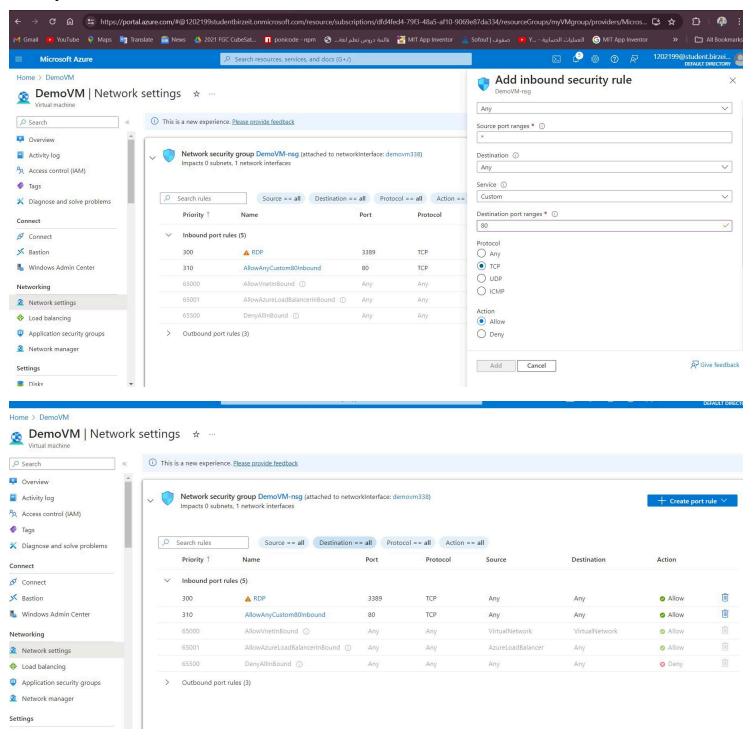

- **Create a basic HTML file with your bakery information, pictures (optional), and contact details. Configure your chosen web server to serve the HTML file you created. This will involve setting up the appropriate directory for your website files.**
 - Go to C:/ file then to inet pub.
 - Choose wwwroot
 - Then we will see the default web page then i will change the notepad content of html file to my BAKERY html file as required .

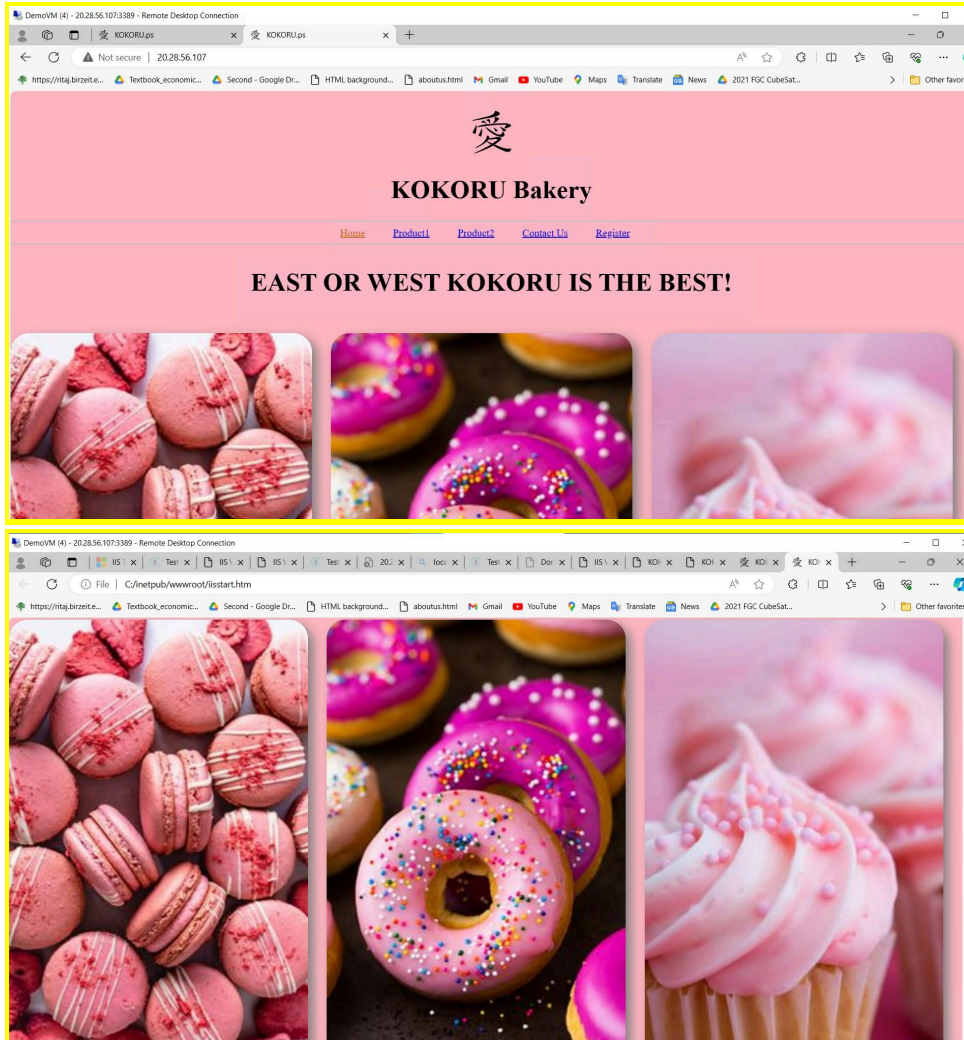

And should now from the network setting create port rule by choosing inbound port rule that the port is 80 and TCP:

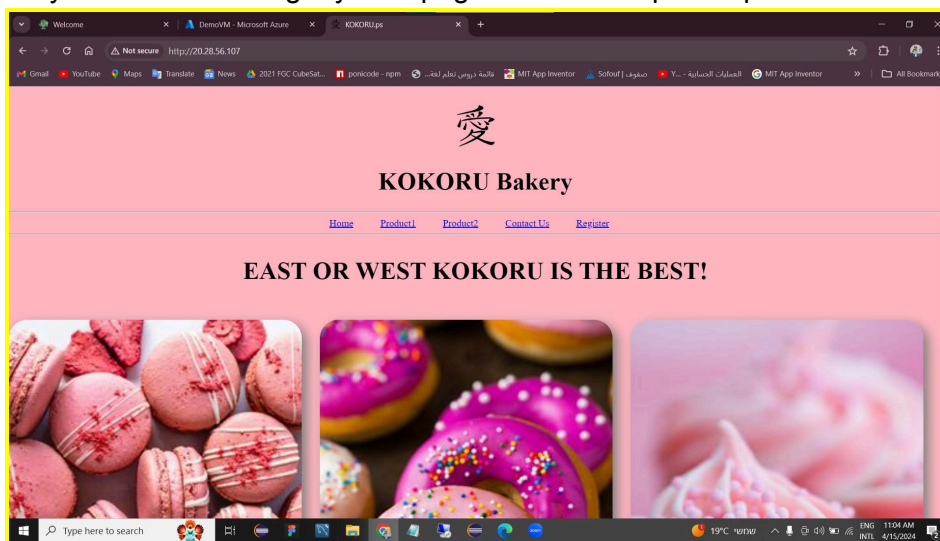

- Once everything is set up, try accessing your website by opening a web browser and entering the public IP address of your VM. You should see your bakery website.

Here is my local host VM running the html page with the public ip address:

this is my local host running my html page with the the public ip address that create in VM:

**AND YAHOOOOOOOO!!!!!! Finally Here is my
website on Vrtual machine 🧚🧚🧚🧚**

Here is the link: <http://20.28.56.107/>

**Cant wait for your feedback!
Thank u!!!!**
